

SG BLUE DEVIL FOR 1" HOSE

Description:

4 flow selection ring without pattern changes, including flush position.

The two main differences with the "current" models are:

- Heavy-duty construction for use in the most demanding conditions such as with fire fighting. Durable and heavy-duty design, choice of materials and new reinforced spindle shaft. Highly resistant collisions and falls. Working pressure can peak up to 30 bar.
-
- Low flow works at its best from 25 lpm at 7 bar.

Improvements:

- It clicks between water effects (from jet to fog, etc) to better help choose the desired effect.
- Improved rubber bumper allows better grip with gloves.
- No more stickers with flows. It is all laser engraved.
- Improved handle.
- Easier to replace spinning teeth.
- Metal ball valve for working at high pressures.

Flows at 7 bar:

- 25 / 50 / 125 / 200 lpm
